

PROFESSIONAL SUMMARY

Highly motivated Android Developer with 1.8+ years of dedicated experience building high-performance, feature-rich mobile applications specializing in Kotlin and MVVM architecture. Proven track record of developing complex, large-scale multi-service platforms encompassing ride-hailing, marketplace, and food delivery systems. Adept at designing responsive Material Design UIs, optimizing client-server data flow via Retrofit and GraphQL, and executing delivery within structured Agile environments.

TECHNICAL SKILLS

Languages	Kotlin, Java
Android UI	XML Layouts, ConstraintLayout, Jetpack Compose (Learning), RecyclerView, ViewPager2, Material Design Components, Navigation Component, Fragment Transactions
Architecture	MVVM, ViewModel, LiveData, Repository Pattern, Clean Architecture Foundations
Data & Networking	Room DB, Retrofit, OkHttp, REST API, GraphQL (Apollo Client), JSON/GSON Parsing
Firebase Ecosystem	FCM (Push Notifications), Firebase Realtime Database
SDKs & Integrations	Google Maps SDK, Location Services, Sinch SDK (In-App Voice Calling)
Tools & Methods	Agile/Scrum, Jira, Git, GitHub, GitHub Actions, Gradle, Postman, Firebase Console

PROFESSIONAL EXPERIENCE

Android Application Developer

Sep 2024 – Present · 1 yr 9 mos

Trioangle Mind Technology · Madurai, India

- Developed and engineered responsive Android application UIs using Kotlin, XML layouts, ConstraintLayout, RecyclerView, and Material Design components.
- Implemented structured client-side local data caching and persistence layers utilizing Room DB to facilitate seamless offline workflows.
- Designed robust multi-screen application navigation flows using Jetpack Navigation Component and strict Fragment transaction lifecycle management.
- Collaborated actively within an Agile/Scrum team setup, leveraging Jira for lifecycle tracking, milestone management, and daily standups.
- Consumed backend microservices by implementing Retrofit and GraphQL (Apollo Client) to execute low-latency data updates across active application modules.
- Integrated Google Maps SDK and location systems to render accurate live map tracking, markers, and custom route overlays.

- Configured Firebase Cloud Messaging (FCM) for real-time transactional push notifications and engineered encrypted in-app voice calling via Sinch SDK integration.
- Managed version control, feature branch branching strategies, and codebase maintenance using Git, GitHub, and continuous integration workflows via GitHub Actions.

KEY PROJECTS

GoferJek — Multi-Service On-Demand Platform

Commercial Product

Technologies: Kotlin, Java, MVVM, Room DB, Retrofit, REST API, Google Maps SDK, FCM, Sinch SDK

- Architected client-side features for a massive multi-service ecosystem hosting 6 independent service verticals inside a single modular architecture.
- Gofer & Tow: Built real-time ride-hailing and towing request UI flows with live driver geographical mapping and dynamically calculated fare matrices.
- Delivery All & Delivery: Formed multi-restaurant catalog listings, shopping cart modules, and real-time live route delivery tracking systems.
- Handy & Laundry: Programmed specialized home-services scheduling calendars, service provider directories, and instant booking workflows.
- Unified cross-application services into a single codebase by designing a synchronized bottom navigation bar, central notification center, and shared digital wallet UI.

PassUp — Peer-to-Peer Marketplace App

Commercial Product

Technologies: Kotlin, MVVM, GraphQL, Apollo Client, Firebase Realtime Database, Google Maps SDK

- Developed classified marketplace features utilizing GraphQL (Apollo Client) for highly optimized, selective attribute data fetching.
- Designed extensive product upload and search layout systems featuring multi-image selection, category filters, and text autocomplete.
- Built real-time transaction negotiation chat interfaces backed natively by Firebase Realtime Database for live user messaging.
- Created dynamic user profile layouts displaying seller feedback tracking, verified status badges, and chronological transaction history.

ADDITIONAL EXPERIENCE

Associate Trainee Engineer (Network Support)

Jan 2023 – Sep 2023 · 9 Months

CMS IT Services · Corporate Office

- Monitored critical network infrastructure links and enterprise hardware devices using INMS tools to maximize service uptime.
- Administered cloud-managed network switches and access points via the Meraki Dashboard environment.
- Managed technical network incident tickets and performance SLAs strictly through corporate Jira workflows.

EDUCATION

Bachelor of Engineering (B.E.) — Computer Science & Engineering

Graduated 2022 · Full-Time

Sethu Institute of Technology · Tamil Nadu, India
